FOR WINTER TEST ACTIVITIES?

Personalized Logistics Solutions

Adding logistics value in Sweden

There are many issues that needs to be addressed in order to ensure efficient operation during winter testing of vehicles.

Incorrect customs clearance, problems with temporary imports, delayed delivery of vehicles to the proving ground and poor security thinking must simply never happen. Correct handling of all these issues is crucial for efficient and cost-effective testing in the winter environment.

Infranordic has for the past six years worked closely with companies that spend time in the Swedish winter test region testing vehicles. We know what it takes to make things run smoothly for these operations.

You can rest assured that we will attend to all the details. All you have to think about is optimizing the testing during your stay in the Swedish winter test region.

Personalized Logistics Solutions

Services on arrival in Sweden

- Supervising ETA dates.
- Coordinating with the staff at the proving ground in winter environment and with client abroad.
- Dealing with container/air freight arrival at a Swedish port or airport.
- Transporting containers to our bonded terminal and unloading vehicles. Our terminal has stringent security regulations including a strict policy against photography.
- Administration of necessary customs documents. This includes every aspect of customs clearance for temporary import of vehicles, testing equipment, clothes, kitchen utilities, food and customs clearance of tires and miscellaneous parts.
- Transportation to the proving ground in the Swedish winter test region.
- On-site engineering support via HRM Engineering. See page 5.

Personalized Logistics Solutions

Services when the testing period is over

- Car pick-up in the Swedish winter test region.
- Car transport to an airport or our terminal for container loading.
- The vehicles are loaded according to your instructions regarding chassis number and other relevant details.
- Container booking on receipt of agreement or under own agreement.
- Loading vehicles at a terminal with high security standards.
- Closing temporary import documents and issuing correct export documents.
- Transparent daily status updates regarding vehicles, container vessels and aircraft.

Personalized Logistics Solutions

Skills that get the wheels turning

When the test vehicles arrive in Sweden faults might have appeared that render them undrivable. To get them up and running again HRM Engineering can offer full on-site engineering support.

Our engineers have extensive experience when it comes to fault tracing test vehicles on both the hardware and software sides. In collaboration with the vehicle manufacturing team we take responsibility for getting the vehicles fully functional and ready to be transported to the vehicle test facility.

HRM Engineering is Infranordic's servicepartner

HRM is an engineering company with specialists in a wide range of areas. We deliver advanced solutions that are synonymous with high quality to the automotive industry and other industries that have high demands in the areas of efficiency and environmental awareness.

HRM works successfully with electronics and software for existing and future automotive industries, and we have unique expertise in hybrid and electric vehicles.

HRM today is the chosen local development partner of LG Chemicals, in the automotive hybrid and full electric segments.

Personalized Logistics Solutions

Personal service well beyond the usual

Whatever the challenges you face in your winter testing operations, we offer you a customised relationship and a level of personal service you thought no longer existed.

Our customers receive access to logistical services of the highest order, provided with maximum cost-effectiveness. We create customer-adapted solutions well suited for all aspects of winter testing logistics.

Call me, at +46 31 333 20 86, and I'll explain more.
